The plant manufactures and sells ceramic bricks and stone. The products are manufactured using the soft-mud forming method.

The radiation and hygienic researches showed that the ceramic bricks and stone can be used in the industrial and civil construction, including for medical and childcare facilities.

Saransk Research and Production Company Svetotekhnika NPO LLC was founded in 2021. The main activity is the production of double-ended linear LED lamps.

Double-ended linear LED lamps are designed for spotlights lighting offices, administrative buildings, industrial and commercial facilities. The products can be used both instead of luminous tubes in certain types of spotlights (with the connecting diagram modification) and in new lighting devices. The lamp envelope is made from light glass. All lamps do not contain mercury or other harmful substances and can be disposed as domestic waste. The light-emitting diodes used in AVANLED lamps enable up to 125 lm/W luminous efficiency.

info@rusfiber.ru
rusfiber.ru

The first and only Russian factory of optical fiber production. Optic Fiber Systems JSC produces telecommunication optical fibers and provides services on optical fiber coloring and the application of ring marks "Ringmarking".

G652D - standard single-mode optical fiber with low water peak, first domestic optical fiber on the Russian market. This optical fiber is used into trunk cables for communication systems, electrical energy industry, as well as into ground wires.

G657A1/G652D - single-mode optical fiber with low water peak (hybride) is a fiber with a reduced sensitivity to bends.

G657A1/G652D ALPHA - single-mode optical fiber with low water peak (hybrid with advanced characteristics).

2% high-tensile fiber - standard single-mode optical fiber with low water peak for communication systems with 2% tension.

Fiber with 200 μm diameter - standard single-mode optical fiber with low water peak for communication systems with 200 μm diameter provides high density of fiber in cable due to reduced 200 μm diameter of protective coating.

G654.E - advanced pure silica core single-mode optical fiber with low transmission losses over long distances for the construction of high-performance optical telecommunications networks such as terrestrial long-distance communication systems and submarine trunk cables with optical amplifiers.

info@izolain.ru

izolain.ru

The main activity of the company is manufacturing of PEF-based thermal insulating products, wind- and moisture-proof and steam-tight films from woven and nonwoven fabrics.

PEF bands are a kind of a tubular cover without inner longitudinal section. This is the best solution for thermal insulation and filling of holes in panel, brick and log walls.

Izolain LM is a two-layer material consisting of a PEF layer and metalized lavsan film. It has improved heat-reflecting, sound-proof, steam- and moisture-proof properties.

Mats are a multilayered PEF insulating material. The mats are 15-50 mm thick and have improved heat-, sound-, moisture- and shock-proof properties used for construction, finishing, as well as sport and play spaces.

Tubular covers are a PEF heat and sound insulating material. Effective protection of pipes from corrosion, ambient impact and temperature differences..
